Art Unit: 3726

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
2. Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over the admitted prior art set forth in the specification in view of Tagawa et al (5,056,581).

The prior art set forth at page 1 of the specification teaches that it was known to use fasteners to connect a forged ring gear to a cast differential casing made of steel or ductile iron. Tagawa et al teach forming a ring with forged projections and casting a housing to the ring. It would have been obvious to one of ordinary skill to modify the process of the prior art to substitute the casting of the housing to the ring gear to eliminate the fasteners and to quickly attach the gear to the housing. The limitations to machining the teeth or casing are considered to have been obvious matters of choice and within the skill of the ordinary artisan. It is noted that there is no disclosure of the machining causing any new or unexpected results. The specification teaches at page 5, lines 14-15 that it was known to induction harden gear teeth. Official Notice is taken of near-net forging as a process for reducing the need for subsequent machining. It would have been obvious to near net forge the ring gear to reduce machining.

3. Applicant's arguments with respect to claims 1-9 have been considered but are moot in view of the new ground(s) of rejection.
